STATE CAPITOL

TED SCHWINDEN, GOVERNOR

STATE OF MONTANA

HELENA, MONTANA 59624

P.O. Box 1728

Dear Reader:

The purpose of this publication is to report labor market information for the state of Montana. It is hoped that this information will be of value to officials and persons with responsibilities for the development and implementation of employment and job training programs.

Comments, suggestions, and questions regarding content and format are invited.

Sincerely,

Bob Rafferty, Chief
Research and Analysis Bureau

GENERAL INFORMATION
DESCRIPTION OF ATTACHMENTS

ATTACHMENT I: Report 3

Social Indicators for Planning and Evaluation - 1980 Census of Population:

These tables list census data in a cumulative formation for the counties in each of the two Service Delivery Areas (SDA). The major categories in this geographic profile include demographic and social characteristics; labor force status and composition; and industry and occupation by race and sex.

ATTACHMENT II: Report B-LBL

Several tables that will be included in the Annual Planning Information publication summarize the expected 1987 labor force composition. Categories such as age groups, sex, and race are compiled by population, labor force participation, employment, unemployment, and unemployment rate. Statewide and each SDA are listed.

ATTACHMENT III: Report A-LBL

Several tables indicating household and family composition, employed persons by major industry groups, and poverty and income levels have been included. The estimates are based on 1985 Current Population Survey data for statewide and Service Delivery Areas.

ATTACHMENT IV: Population Report

Population by county is summarized by age, sex, race, and economic disadvantaged and is based on 1980 census information.

OTHER INFORMATION:

The 1985 Current Population Survey (CPS) Geographic Profile for the State of Montana will be available in May and contains annual average CPS data. Employment and unemployment are listed by many categories. This data may be obtained by contacting John Zavalney. Statewide CPS data from 1981 through 1985 is available.

The 1987 Annual Planning Information publication should be available in July and will have the same general layout as the 1986 publication. If any other information should be included in the publication in order to meet your planning needs, please contact the Research and Analysis Bureau.

New 1990 industry and occupation projection information will be published in May. Both industry and occupational growth is less than the previous projection - a reflection of Montana's slower economic prosperity.

Montana in Review
1985

Montana's economic prosperity was minimal in 1985. Meanwhile, the national economy is continuing a growth period unmatched in recent business cycles.

After a two year improvement, Montana's 1985 nonfarm wage and salary employment survey indicates 2,700 fewer jobs existing than in the previous year. This 1.0 percent workforce reduction compares unfavorably to the nation's 3.4 percent increase in jobs. Half way through 1985 employment levels in Montana and only three other states was less than one year ago.

Montana's services industry is the only major industry maintaining growth in 1985. Industries leading the job losses were mining, manufacturing, wholesale trade, and construction. The Annual Planning Information publication will have an in-depth review and outlook of the state's major industries.

Several factors are contributing to Montana's economic erosion.

1. Agriculture is experiencing a sharp decline in revenue that was created by the past drought and the low crop prices. Montana's drought was the worst in at least twenty years.
2. New business startups were fewer than any of the previous years since 1981.
3. The oil and gas exploration activity has been dwindling

since its peak in 1981. Drilling rig results in this industry are down 40 to 50 percent.

4. The construction industry is showing a strong decline in both housing development and commercial projects.
5. The lumber and woods industry is continuing to struggle in a very competitive market. Many lumber mills have closed throughout the northwestern United States, but the production capacity is still greater than product demand.
6. Montana is continuing a weak recovery brought on by the loss of several thousand basic jobs during of the early 1980's.

Current estimates of non agricultural earnings for production workers indicates that average earnings improving by 2.7 percent from 1984 to 1985. However, Montana is losing ground with the national average weekly earnings. In 1982 Montana's average weekly earnings was nearly one percent more than the U.S. average, and in 1985 Montana's pay for production workers became five percent less than the national average.

Montana's unemployment rate is increasing again. The unemployment rate shifted from 7.4 percent in 1984 to 7.7 percent in 1985. The national unemployment rate is showing a positive change - declining from 7.5 percent to 7.2 percent. Montana's 1985 unemployment rate became greater than the national rate for the first time since 1978.

1987 Population and Civilian Labor Force Outlook

A positive outlook has been projected for Montana's 1987 civilian labor force. Dropping to 7.2 percent, the unemployment rate in 1987 will be the lowest since 1981. In the next two years, unemployed persons will be slightly fewer than the current jobless count. Economic activity should allow employment to increase by 7,500 workers over the next two years. This job expansion amounts to a one percent annual increase - low by historical standards.

Demographics and a continuing weak state economy keeps the job growth modest. Fewer youth will be entering the labor force as the "baby boom" generation ages. Montana's economic dependency on natural resources creates a slow prosperity outlook under current world market conditions.

Population increases are occurring at a slower rate. Revised Montana population in 1985 was 826,000, which is only a 3,000 enlargement from the previous year. In 1987, the state's population is expected to be 834,000. This would be an increase of 4,000 per year from 1985's population figure.

Montana's population increased by five percent in the period 1980 through 1985. In comparison, the growth rate of the western region of the United States amounted to 10.8 percent while the nation experienced a 5.4 percent increase in population.

Montana's population increase is mainly attributed to more births than

deaths balanced against a net migration factor of zero. That is, about the same number of people left the state as moved here between 1980 and 1985, while the birth rate accounted for the 39,000 person increase.
